

Hobart Jet-Ex II 28.5V DC Ground Power Unit

Summary:

The Hobart Jet-Ex II provides ground electrical power characteristics tailored to the requirements of turbo-jet, turbo-prop, and piston engine executive aircraft with 28.5V DC electrical systems. The Hobart current limiting “Soft-Start” control is recommended by most turbine-powered aircraft manufacturers for protection of the engine starter shear section. Inrush current may be set to a limited value between 700 and 1300 amperes as recommended by the aircraft manufacturer. A special 400 ampere “Low” current limiting systems is provided for helicopter and small turbine starting.

Typical Aircraft:

Any aircraft with a 28.5V DC (or similar) electrical system

Specifications:

Output voltage: **28.5V DC**
Output amperage: **1300 Amps (peak)**
Current rating: **530 Amps (continuous @ 28.5V)**
Weight: **1,900 Lbs**
